	Yesterday	Today	Conflicts/Obstacles
Zach	Reading through list of user stories given us and brainstorming on what changes would need to be made.	Figured out that the database helper would need a lot of methods added, started to work on that.	Figuring out JavaFX and how it works when calling new pages. Deciding on best way to do database helper to align with future requirements.
Chris	Read through user stories and came up with plan on how to address each story.	Implemented expiration dates into the invite codes and assisted in changing the function of roles. Looked into implementing validators for inputs.	Learning how SQL functions work and determining an appropriate length for the expiration date.
Darren	Looked at user story, created plan and outlined steps needed	Worked with Zach to come up with parts of mine that will overlap, and worked out what functions we should implement.	We need multiple functions that can benefit us both, and we both have different classes as well that have deadlines we have to meet.
Dara	-Reviewed and debugged UserLoginPage, checked for proper redirection to other home pages. Also implemented logout feature for UserHomePage	Implemented RoleSelectPage features and made sure to verify each role input and what page the user should go to after updating the methods inside	Originally dealt with database connection errors in userGetRole, where the connection was null.
Joseph	-Reviewed all user stories to get a complete understanding of the application. Created a list of tasks to complete assigned user stories.	-Implement the login functionality of User story 1 and ensure proper functionality. (relatively simple)	-New to Java as a whole. Originally faced issues where the call to the userLogin page after account creation would loop causing errors.
Kyle	Studied user story, created plan and outlined steps needed.	Implement the user story in code - should have most of it done today	Inbound call will need RoleSelectPage for call Outbound pages needed Also role count call needed Also new to javafx/sql
